

[Ganache-cli on npm](#)

In this lesson, we are going to cover how to install Truffle.

If you are on a windows machine follow the next couple of steps. Install chocolatey from <https://chocolatey.org/>. Once it is installed, open a Powershell prompt as an Administrator and run the following commands (last command optional):

```
$ choco install nodejs.install -y
```

```
$ choco install git -y
```

```
$ npm install -g npm
```

```
$ npm install -g -production windows-build-tools
```

```
$ choco install VisualStudioCode -y
```

The rest of the tutorial is relevant for everyone regardless of your operating system.

Install npm if you haven't already, from <https://www.npmjs.com/get-npm>

Run the following commands in the command line as root/administrator .

```
$ npm install -g ganache-cli
```

```
$ npm install -g truffle
```

If you are still running into problems on Windows check the truffle documentation about resolving naming conflicts in the Truffle documentation.
