

Introduction

Hello and welcome to ConsenSys Academy's 2018 Developer Program, where you will learn everything you need to know to become a world-class blockchain developer.

In this course, we start off by teaching you about the underpinnings of the blockchain and show how it all comes together to allow us to build the next generation of web applications.

We then introduce you to Solidity, a programming language for Smart Contracts that lets you interact with the Ethereum Virtual Machine. We will walk you through many types of smart contract code, introduce you to key development tools, and show you all the best practices for smart contract development, all to prepare you for the final project towards the end of the course.

So without further ado, we wish you the best of luck, and let's get started!
